

## COSTING

### GROUP OF PRODUCT

#### Edit / Create

- ERROR : If "Use English for empty description" is ON : When click on SAVE all fields will be replaced by ENGLISH description. Even if fields are not empty.

### TYPE OF PRODUCT

#### Edit / Create

- ERROR : If "Use English for empty description" is ON : When click on SAVE all fields will be replaced by ENGLISH description. Even if fields are not empty.

### COST LIST

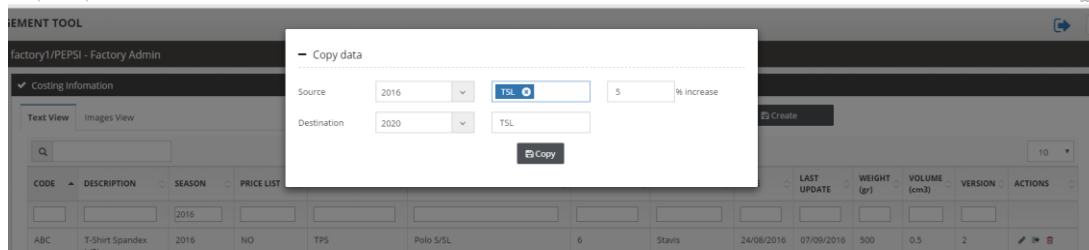

#### Create

- ERROR : I can't save the data
- When select on Type of Product should also copy the descriptions on all languages.

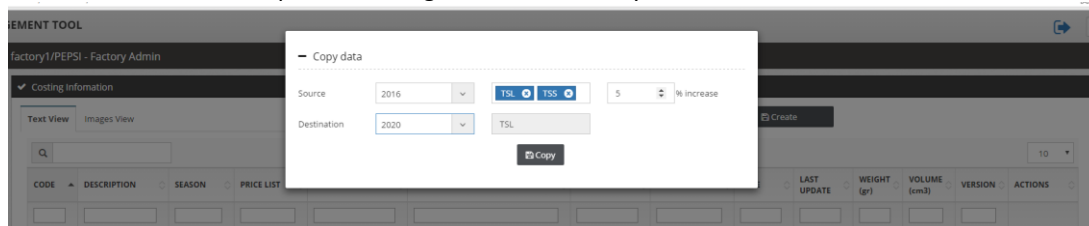

#### Create by copy

- When copy all items of a selected season shows ERROR

- When copy a single item it is ok.

- When copy various items (not a single item, not all ) it is ok, but the name of the code of new records are not fine, it replaces the original code names by a number

My suggestion is to eliminate this option. So or we copy all, or we copy only one. Not multiple records on a same time.

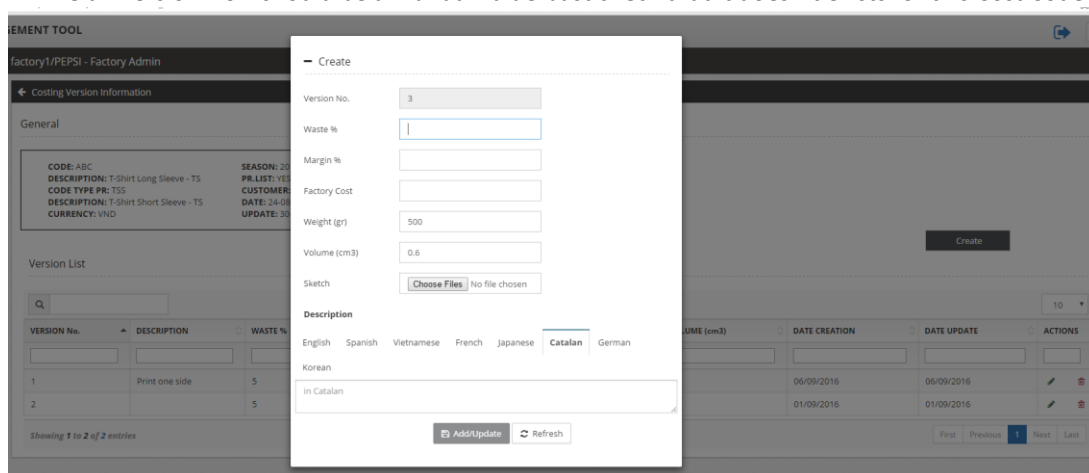

- On Create by copy, if we select All items of a season to be copied, then we have to copy all items which Price List field is YES (exclude those which is NO). But when copy a single code, then we should not have this limitation and we should be able to choose any code, no matter if Price List is YES or NOT.

- On the option of Create by copy is missing the option to copy the codes from Type of Products . So need to select one source season and one new season. Then create all new records on Cost List using the information of Type of Product.

## COST LIST VARIANTS

### Create

- Field "Version No." should be a manual value. Just check that it doesn't exists for this Cost Code.

## Delete

- When try to delete one record it gives ERROR

## Edit and Save

- Creation date and Update date changes when only Update date should change
- When return to Cost List, it should return to same screen and same position, I mean, If there was a filter when swift to Cost List Versions, when return to Cost List screen those filters should be on.
